NETS10 mini

All constellations Linux OS UHF Radio Communication Cloud service

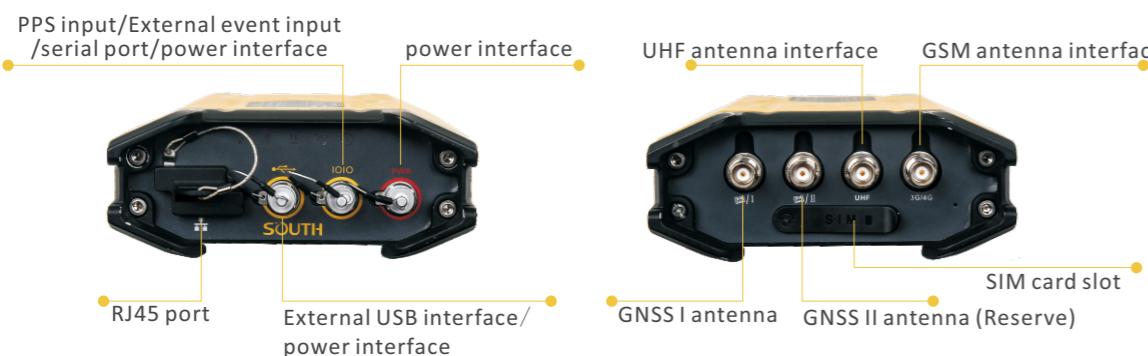

NET S10 mini

Net S10 mini is a new multi-band and multi-constellation CORS/monitoring receiver, which is able to track all GNSS constellations and all current and future signals. Using the international mainstream operating system-Linux, and coupled with the powerful software and the strong computing performance, S10 mini can be widely used in various scenarios.

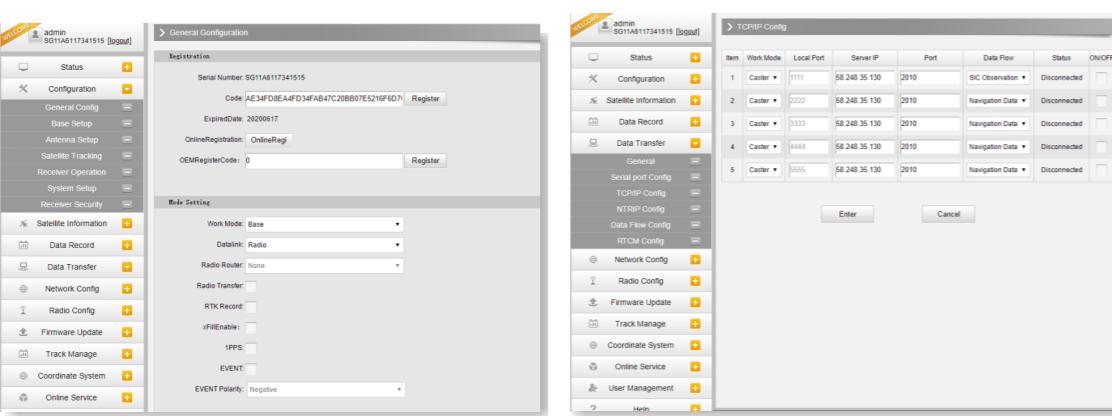

Key features:

- All-in-view constellation tracking
- 10/100M Ethernet interface, supports HTTP protocol, and 5 independent data streams transmission
- Supports STH、RINEX2.x、RINEX3.x, customizable sampling interval.
- Supports dual-antenna configuration,
- Built-in network module, easy to operate, ultra-low power consumption.

Web interface

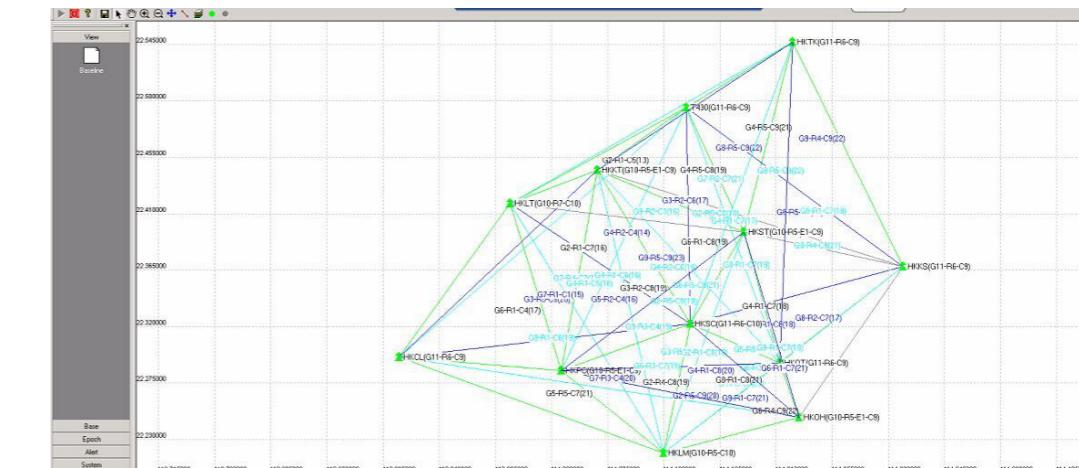

Net S10 mini adopts the advanced embedded LINUX operating system, so that users are able to login web interface of S10 mini to configure various parameters via WiFi or network cable connection, thus, users can access to web interface with any mobile terminals like cellphone, tablet and laptop, which greatly improve the operation experience and flexibility. And registration, firmware update, data transmission are implemented on web interface.

NRS software

NRS (Network Reference System) CORS software system is developed by SOUTH company independently which can provide proper correction service and data management.

NRS contains all features of VRS technology, also at the same time it has part of advantages of FKP and MAX. Deep-NRS is a new improved technology which based on NRS, it increases usability of network CORS and provides auto work mode selection for rover.

Deep-NRS---Optimized NRS technology makes the system more usable.
Fully support GPS+GLONASS+BDS+GALILEO---Provide differential data with all constellations.
Be compatible with current main brands---Support processing reference data from Trimble, Leica and so on.
Unlimited stations and rovers---Permanent key for unlimited stations and rovers.
Distributed structure---Provide safer security system.
Eagle mode---Every base station can be a 'reference' station.
