Specifications

GNSS Features	
Channels	1698
GPS	L1C, L1C/A, L2C, L2P(Y), L5
GLONASS	G1, G2, G3
BDS	B1I, B2I, B3I, B1C, B2a, B2b
GALILEO	E1, E5a, E5b, E6, AltBOC*
SBAS	L1*
IRNSS	L5*
QZSS	L1, L2C, L5 [*]
MSS L-Band*	Reserve
Positioning Output Rate	1Hz~20Hz
Initialization Time	< 10s
Initialization Reliability	>99.99%
Positioning Preci	sion
Code Differential	Horizontal: 0.25 m + 1 ppm RMS
Positioning	Vertical: 0.50 m + 1 ppm RMS
GNSS Static	Horizontal: 2.5 mm + 0.5 ppm RMS Vertical: 3.5 mm + 0.5 ppm RMS
Static (Long	Horizontal: 2.5 mm + 0.1 ppm RMS
Observation)	Vertical: 3 mm + 0.4 ppm RMS
Rapid Static	Horizontal: 2.5 mm + 0.5 ppm RMS Vertical: 5 mm + 0.5 ppm RMS
РРК	Horizontal: 3 mm + 1 ppm RMS Vertical: 5 mm + 1 ppm RMS
RTK(UHF)	Horizontal: 8 mm + 1 ppm RMS Vertical: 15 mm + 1 ppm RMS
RTK(NTRIP)	Horizontal: 8 mm + 0.5 ppm RMS Vertical: 15 mm + 0.5 ppm RMS
SBAS Positioning	Typically<5m 3DRMS
RTK Initialization Time	2~8s
IMU Tilt Angle	0°~60°

Dimension 105mm(φ)*58mm(H) 540g (battery included) Weight Material Magnesium aluminum alloy shell Operating Temperature -45℃~+75℃ Storage -55℃~+85℃ Temperature Humidity 100% Non-condensing IP68 standard, protected from long time Waterproof/Dustp immersion to depth of 1m roof IP68 standard, fully protected against blowing dust Withstand 2 meters pole drop onto the Shock/Vibration cement ground naturally Power Supply 6-28V DC, overvoltage protection Inbuilt 6800mAh rechargeable Lithium-ion Battery battery

Battery Life 25h (rover mode) I/O Port Type-C interface (charge+OTG+Ethernet) UHF antenna interface Internal UHF Radio receiver Frequency 410-470MHz Range Farlink, Trimtalk, SOUTH, HUACE, Hi-Communication Protocol target, Satel

Range	Typically 8km with Farlink protocol	
Bluetooth	Bluetooth 3.0/4.1 standard, Bluetooth 2.1 + EDR	
NFC Communication	Support	
Data Storage/Tra	nsmission	
16GB SSD internal storage		
	Automatic cycling storage	
Storage	Support external USB storage (OTG)	
0	The customizable sample interval is up	
	to 20Hz	
Data	Plug and play mode of USB data	
Data	transmission	
Transmission	Supports FTP/HTTP data download	
	Static data format: STH, Rinex2.01,	
	Rinex3.02 and etc.	
	Differential data format: RTCM 2.1,	
	RTCM 2.3, RTCM 3.0, RTCM 3.1,	
Data Format	RTCM 3.2	
	GPS output data format: NMEA 0183,	
	PJK plane coordinate, Binary code	
	Network model support: VRS, FKP,	
	MAC, fully support NTRIP protocol	
Sensors		
IMU	Built-in IMU module, calibration-free, 60°	
	Visual positioning camera: 8MP (can be	
Camera	used in AR stakeout)	
	AR stakeout camera: 2MP	
	Controller software can display	
Electronic Bubble	electronic bubble, checking leveling	
	status of the carbon pole in real-time	
	Built-in thermometer sensor, adopting

- \checkmark 5th generation IMU

Five New Features

- To Give You More Productivity

S805, the New Pop Star Save Weak Signal

SOUTH S805 has 1698 channels to track more satellites and weak signals.

The success rate and speed of obtaining a fixed solution has been greatly improved. Under the dense forest and surrounded by buildings, it just takes tens of seconds to get a fixed solution.

Dual Camera AR Stakeout Extra Convenience

INNO4 allows you to use both of front camera and bottom camera to stakeout points, lines, curves.

The AR guideline on controller app will indicate you to go to the correct direction since you are tens of meters away from the target.

Dual-Engine GNSS Positioning Algorithm

Unlike traditional GNSS receivers, the INNO4 is equipped with two different positioning algorithms.

When users encounter inaccurate VRS RTK positioning due to unusually active ionospheric conditions, they can enable the second set of algorithms in the software to correct errors in real-time and improve measurement accuracy. (by selecting Enhanced Positioning Mode in the SurvStar app.)

Farlink 2.0 Radio More Performance

When compared with the last generation Farlink, INNO4s Farlink 2.0 radio can undertake larger data and provide more stable transmission, working range is as far as 10-12 km in ideal condition.

→ 与亨美术理

如能使

With the "lock-base" function, INNO4 can keep receiving data from one specific base. Even though several bases are transmitting with the same frequency

The 5th Gen. IMU New Experience

The latest update of IMU effectively eliminates the loss of Inertial-Measurement-Usable Status in the majority of scenarios, enhancing IMU availability and productivity.

During AR stakeout, visual positioning and 3D modeling collection, you can walk at your own pace without worrying about losing IMU, making workflow smooth.

SOUTH Target your success

INND4

Visual Positioning —Do What Traditional RTK Cannot Do

More Efficient than Traditional RTK

INNO4 processes a group of photos or a video in realtime, obtaining coordinates for hundreds of points within minutes. It outpaces traditional RTK in data acquisition speed. INNO4 also has a broader working range and fewer blind spots, enabling remote measurements in areas with poor GNSS signal quality. Previously challenging spots, like spaces under rooftops and areas with obstacles, are now easily measurable.

More Versatile than Traditional RTK

Leveraging visual positioning, surveyors can efficiently operate in the field. Image data, stored for an extended period, is reusable at any time. These capabilities are especially well-suited for unique GNSS measurement tasks, such as documenting accident scenes and excavation sites for urban public facilities.

SOUTI-Target your succes

INNO4 visual positioning allows surveyors to remotely measure points up to 10 meters or more (in ideal conditions), eliminating the need to physically approach each point. This method significantly reduces physical effort in fieldwork.

Safer than Traditional RTK

Visual positioning helps users mitigate risks when surveying near hazardous areas, such as busy roads and lakes, ensuring surveyors' safety. A secure working approach is not only a personal requirement but also essential for the well-being of your family.

3D Modeling —Broadening Your Working Power

INNO4 utilizes SOUTH's 3D modeling technology, integrating image measurements seamlessly with UAV data from DJI and other brands. Addressing data gaps in UAV surveys,

INNO4 enhances survey outcomes by supplementing incomplete models with ground image data collection.

INNO4 facilitates streamlined single-user 3D modeling, visually presenting geographic information such as coordinates, areas, and volumes. Effortlessly convert model data into various formats and tailor coordinate parameters to meet the needs of different applications.

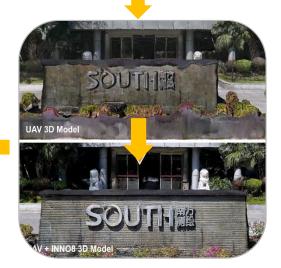

Surveyors can integrate INNO4 data into SOUTH software and third-party modeling software for efficient 3D modeling.

Upcoming versions of SGO (PC) and SurvStar (Android App) will incorporate 3D modeling functions, enabling users to choose the most suitable software for optimal work efficiency based on their specific scenarios and task requirements.

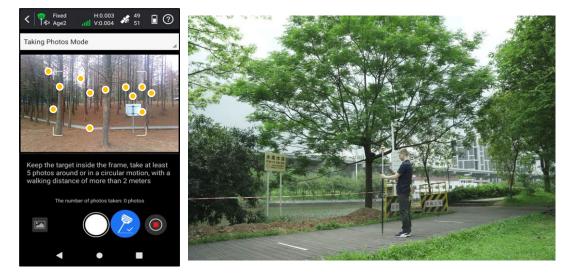

A Few Ways to Process Images

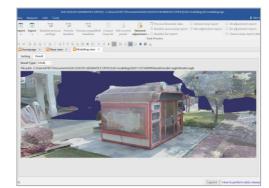

—Tailored for Your Work Needs

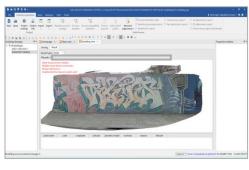

Cloud Server Online Processing Acquire data timely and precisely

Desktop Software Processing Ultra accurate and detailed
